## PREFACE TO THE 1968 EDITION

SIMULA 67 is a general purpose programming language developed by the authors at the Norwegian Computing Center. Compilers for this language are now implemented on a number of different computers.

The Norwegian Computing Center regards the SIMULA 67 language as its own property. The implementations have taken place under contracts with the NCC for professional assistance.

A main characteristic of SIMULA is that it is easily structured towards specialized problem areas, and hence can be used as a basis for Special Application Languages.

This report is a reference document for the SIMULA 67 Common Base. The Common Base comprises the language features required in every SIMULA 67 compiler. The "Introduction" highlights some features of the language. The following sections are intended as a precise language definition. Users manuals and textbooks will appear later.

During our development of SIMULA 67 we have benefited from ideas and suggestions from a number of colleagues. First of all we should like to mention C.A.R. Hoare whose ideas on referencing have been used and extended, S. Kubosch who has been an important source of useful comments and criticism and Mrs. I. Siguenza whose help in the typing of this report has been indispensable.

We should also like to express our gratitude to D. Belsnes, P. Blunden, J. Buxton, J.V. Garwick, Ø. Hjartøy, Ø. Hope, P. M. Kjeldaas, D. Knuth, J. Laski, A. Lunde, J. Newey, T. Noodt, K. S. Skog, C. Strachey and N. Wirth, as well as SIMULA I users who have given advice based upon their experience. Finally, the authors feel that they benefited very much from the SIMULA 67 Common Base Conference in Oslo, June 1967, and would like to thank the participants.

Oslo, May 1968

#### PREFACE TO THE 1970 EDITION

This revised version contains the modifications and clarifications passed by the SIMULA Standards Group at their meeting in May 1970. Several minor errors have also been corrected.

Compilers are now available on a wide range of computers, including CD 3300, CD 3600, CD 6600, UNIVAC 1108 and IBM 360/370.

The authors would like to thank the members of the SIMULA Standards Group for their interest and help, and the typing pool and printing shop of the Norwegian Computing Center for their efficient work.

We would also like to extend our list of acknowledgements in the original preface by K. Babcicky, G. M. Birtwistle, R. Kerr and M. Woodger.

Oslo, October 1970

1. Introduction	- 1 -
1.1. General purpose programming languages	- 1 -
1.2. Special application languages	- 2 -
1.3. The basic characteristics of SIMULA 67	- 4 -
1.3.1. Algorithmic capability	- 4 -
1.3.2. Decomposition	- 4 -
1.3.3. Classes	- 6 -
1.3.4. Application language capability	- 8 -
1.3.5. List processing capability	- 10 -
1.3.6. String handling	- 12 -
1.3.7. Input/Output	- 12 -
1.4. Standardization	- 12 -
1.5. Language definition	- 13 -
2. Class declarations	- 15 -
2.1. Syntax	- 15 -
2.2. Semantics	- 15 -
2.2.1. Subclasses	- 18 -
2.2.2. Concatenation	- 20 -
2.2.3. Virtual quantities	- 24 -
3. Types and variables	- 27 -
3.1. Syntax	- 27 -
3.2. Semantics	- 27 -
3.2.1. Object references	- 28 -
3.2.2. Characters	- 28 -
3.2.2.1. Collating sequence	- 29 -
3.2.2.2. Character subsets	- 29 -
3.2.3. Text	- 30 -
3.2.4. Initialisation	- 30 -
3.2.5. Subordinate types	- 30 -

4. Expressions	- 31 -
4.1. Syntax	- 31 -
4.1.2. Semantics	- 31 -
4.2. Character expressions	- 32 -
4.2.1. Syntax	- 32 -
4.2.2. Semantics	- 32 -
4.3. Object expressions	- 32 -
4.3.1. Syntax	- 32 -
4.3.2. Semantics	- 33 -
4.3.2.1. Qualification	- 33 -
4.3.2.2. Object generators	- 34 -
4.3.2.3. Local objects	- 35 -
4.3.2.4. Instantaneous qualification	- 35 -
4.4. Text expressions	- 36 -
4.4.1. Syntax	- 36 -
4.4.2. Semantics	- 36 -
5. Relations	- 39 -
5.1. Character relations	- 39 -
5.1.1. Syntax	- 39 -
5.1.2. Semantics	- 39 -
5.2. Text value relations	- 39 -
5.2.1. Syntax	- 39 -
5.2.2. Semantics	- 39 -
5.3. Object relations	- 40 -
5.3.1. Syntax	- 40 -
5.3.2. Semantics	- 40 -
5.4. Reference relations	- 41 -
5.4.1. Syntax	- 41 -
5.4.2. Semantics	- 41 -

6. Statements	- 43 -
6.1. Assignment statements	- 43 -
6.1.1. Syntax	- 43 -
6.1.2. Semantics	- 44 -
6.1.2.1. Arithmetic value assignment	- 45 -
6.1.2.2. Object reference assignment	- 46 -
6.2. For statements	- 47 -
6.2.1. Syntax	- 47 -
6.2.2. Semantics	- 48 -
6.2.3. For list elements	- 48 -
6.2.4. The controlled variable	- 50 -
6.2.5. The value of the controlled variable upon exit	- 50 -
6.2.6. Labels local to the controlled statement	- 51 -
6.3. Prefixed blocks	- 51 -
6.3.1. Syntax	- 51 -
6.3.2. Semantics	- 51 -
7. Remote accessing	- 53 -
7.1. Remote identifiers	- 54 -
7.1.1. Syntax	- 54 -
7.1.2. Semantics	- 55 -
7.2. Connection	- 56 -
7.2.1. Syntax	- 56 -
7.2.2. Semantics	- 57 -
8. Procedures and parameter transmission	- 59 -
8.1. Syntax	- 59 -
8.2. Semantics	- 59 -
8.2.1. Call by value	- 60 -
8.2.2. Call by reference	- 61 -
8.2.3. Call by name	- 62 -

9. Sequencing	- 65 -
9.1. Blocks and dynamic scopes	- 65 -
9.2. Quasi-parallel sequencing	- 67 -
9.2.1. The detach statement	- 69 -
9.2.2. The resume statement	- 70 -
9.2.3. Object "end"	- 70 -
9.2.4. go to statements	- 71 -
10. The type " <u>text</u> "	- 73 -
10.1. Text attributes	- 73 -
10.2. "length" and "main"	- 73 -
10.3. Character access	- 74 -
10.4. Text generation	- 76 -
10.5. Text reference assignment	- 77 -
10.6. Text value assignment	- 77 -
10.7. Subtexts	- 78 -
10.8. Numeric text values	- 79 -
10.8.1. Syntax	- 79 -
10.8.2. Semantics	- 80 -
10.9. "De-editing" procedures	- 80 -
10.10. Editing procedures	- 82 -
11. Input-Output	- 85 -
11.1. The class "FILE"	- 87 -
11.1.1. Definition	- 87 -
11.1.2. Semantics	- 88 -
11.2. The class "infile"	- 90 -
11.2.1. Definition	- 90 -
11.2.2. Semantics	- 91 -
11.3. The class "outfile"	- 93 -
11.3.1. Definition	- 93 -

11.3.2. Semantics - 94 -	
11.4. The class "directfile" - 96 -	
11.4.1. Definition - 96 -	
11.4.2. Semantics - 97 -	
11.5. The class "printfile" - 98 -	
11.5.1. Definition - 98 -	
11.5.2. Semantics - 99 -	
12. Random drawing - 103 -	
12.1. Pseudo-random number streams - 103 -	
12.2. Random drawing procedures - 104 -	
13. Utility procedures - 109 -	
14. System classes - 111 -	
14.1. The class "SIMSET" - 112 -	
14.1.1. General structure - 112 -	
14.1.1.1. Definition - 112 -	
14.1.1.2. Semantics - 112 -	
14.1.2. The class "linkage" - 113 -	
14.1.2.1. Definition - 113 -	
14.1.2.2. Semantics - 113 -	
14.1.3. The class "link" - 114 -	
14.1.3.1. Definition - 114 -	
14.1.3.2. Semantics - 115 -	
14.1.4. The class "head" - 116 -	
14.1.4.1. Definition - 116 -	
14.1.4.2. Semantics - 117 -	
14.2. The class "SIMULATION" - 117 -	
14.2.1. General structure - 118 -	
14.2.1.1. Definition - 118 -	
14.2.1.2. Semantics - 119 -	

14.2.2. The class "process" -	120 -
14.2.2.1. Definition -	120 -
14.2.2.2. Semantics -	121 -
14.2.3. Activation statements -	122 -
14.2.3.1. Syntax -	122 -
14.2.3.2. Semantics -	122 -
14.2.4. Sequencing procedures -	124 -
14.2.4.1. Definitions -	124 -
14.2.4.2. Semantics -	126 -
14.2.5. The main program -	128 -
14.2.5.1. Definition -	128 -
14.2.5.2. Semantics -	128 -
14.2.6. Utility procedures -	129 -
14.2.6.1. Definition -	129 -
14.2.6.2. Semantics -	129 -
15. Seperate compilation -	131 -
15.1. Syntax -	131 -
15.2. Semantics -	131 -
16. Common Base restrictions -	133 -
17. Recommended extensions -	135 -
17.1. While statement -	135 -
17.1.1. Syntax -	135 -
17.1.2. Semantics -	135 -
17.2. "prev" -	135 -
18. Features being investigated -	137 -
19. References -	139 -
20. Alphabetic index of syntactical units -	141 -
